

SE Lab 2: Agile Backlog Creation & Sprint Simulation in Jira

Objective: Use Jira to turn functional requirements into Agile backlog items, simulate a sprint, and analyse progress.

NAME: AVANEESH N

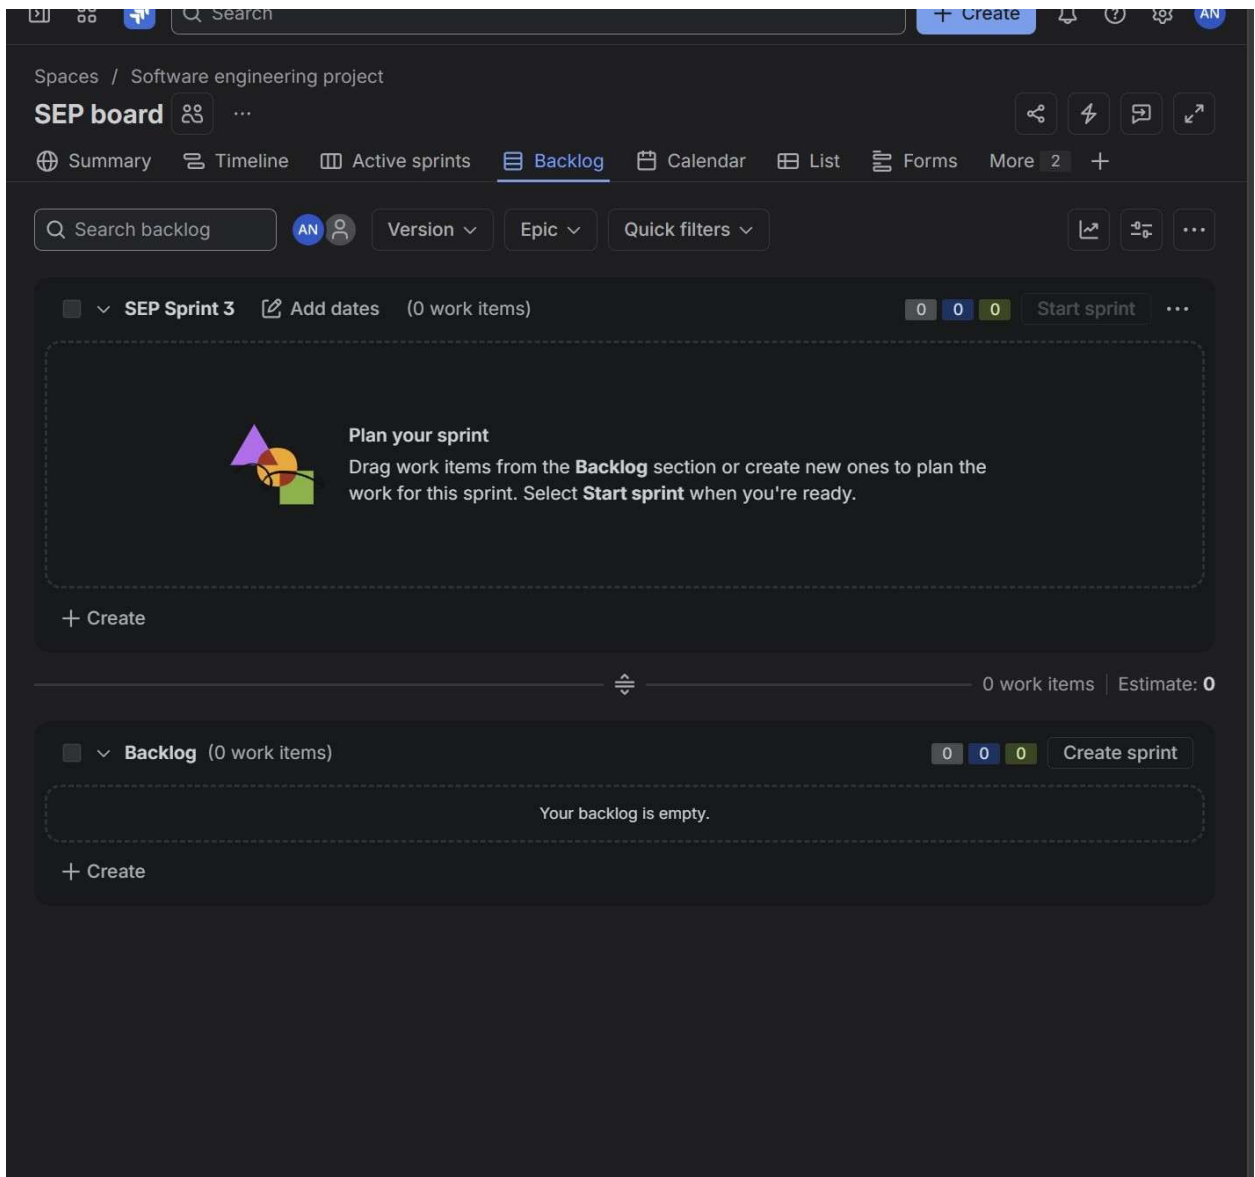

SRN: PES1UG24AM917

Scenario #14

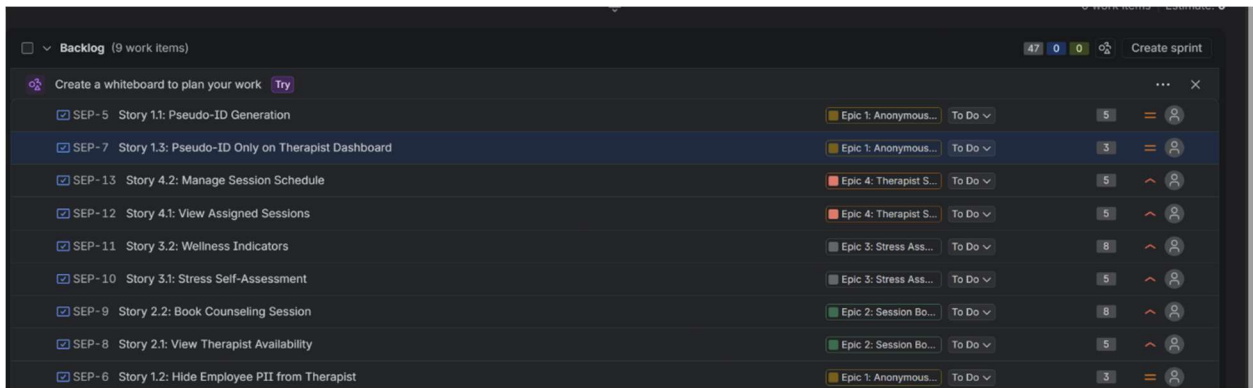

Deliverables:

- Screenshot of: • Jira backlog with Epics and User Stories.
- Story point assignments.
- Sprint board (Active Sprint view).
- Burndown Chart.
- A brief document answering the reflection questions.

1) Jira backlog with Epics and User Stories.

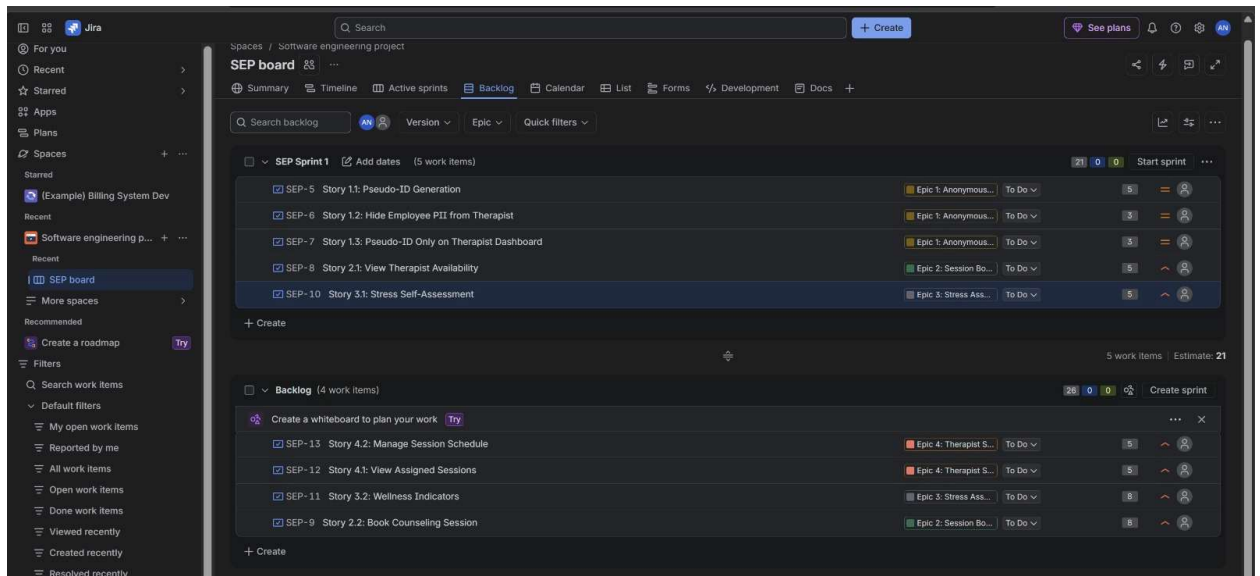

2. Story Point assignments

2) Sprint board

3) BURNDOWN CHART

7) Reflections

1. Did your estimations reflect the actual effort?

Yes. The story point estimates generally reflected the actual effort required for the tasks. The more complex features, such as **booking a counseling session** and **tracking wellness indicators**, were assigned higher estimates, while **viewing assigned sessions** and **managing session schedules** were estimated lower. Overall, the estimates reasonably reflected the relative complexity of the user stories.

2. Was your backlog well-prioritized?

Yes. The backlog was well-prioritized based on the importance and functionality of the system. The user stories were organized across session booking, wellness tracking, and therapist session management. Features such as booking counseling sessions and tracking wellness indicators were prioritized to support the core functionality, followed by viewing assigned sessions and managing session schedules.

3. How did your simulated sprint align with your plan?

The simulated sprint aligned well with our plan. We completed all the planned user stories within the sprint, with the work moving from **To Do → Done** as expected. The sprint included stories related to **Book Counseling Session, Wellness Indicators, View Assigned Sessions, and Manage Session Schedule**, with a total of **26 story points**. Since all planned stories were completed, the sprint goal was successfully achieved. The burndown chart also showed the remaining work decreasing as tasks were completed.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed that our team was able to complete **26 story points** during the simulated sprint. The remaining work decreased as the sprint progressed, and by the end, all planned stories were completed. This indicates that the team had sufficient capacity to handle the planned workload of the sprint. However, since this was a simulated sprint, the 26 story points should be treated as an estimate of our capacity rather than a fixed long-term velocity.
